

This is a PDF version of PECKHAMIA 1(1): 12, January 1977. Pagination of the original document has been retained. Editor's note (7.1): The original negative has been reprocessed to produce the image shown here.

PHOTO. J. Reiskind

Penultimate male *Psecas enoplus* Chamberlin and Ivie, 1936 (ca. 4 mm). This specimen was collected in the understory of the rainforest on Barro Colorado Island, Canal Zone, Panama. It is likely that this species is restricted to the canopy since it has been found after a tree fall and is quite uncommon in the understory. This species was chosen to illustrate the first issue of PECKHAMIA because its color pattern is reminiscent of this past American bicentennial celebration.
